First OpenAI came for the artists and I did not speak out - because I was not an artist.
Then OpenAI came for the writers and I did not speak out - because I was not a writer.
Then OpenAI came for the visual effects artists and I did not speak out - because I was not a visual effects artist.
Then OpenAI came for the programmers - and there was nobody left to speak out for them.

—Steve Coast

Generative AI has the potential to change the world in ways that we can't even imagine. It has the power to create new ideas, products, and services that will make our lives easier, more productive, and more creative. It also has the **potential to solve** some of the world's biggest problems, such as **climate change, poverty, and disease**.

−Bill Gates
